EXILE TURBO SYSTEMS INTRODUCES THE MSBC-1 ET01 MULTI STAGE ELECTRONIC BOOST CONTROLLER

Exile's New Multi Stage Boost Controller Produces Repeatable Controlled Boost

Simi Valley, CA (February 21, 2007)—Exile Turbo Systems introduces the MSBC-1 ET01 multi stage boost controller for performance street, road race and drag race applications. The MSBC-1 electronically controls the wastegate, so you can produce repeatable controlled boost profiles with a variety of turbo systems and in a variety of applications—wrapped up in a cost-effective, easy-to-use package.

Engineering a turbo system to perform at its optimum involves carefully matching all components including turbo, wastegate, intercooler and so on. Creating and controlling boost is essential in obtaining maximum performance. Mechanical wastegate controls can help, to a degree, however they can get complicated if you need more than one stage of boost and results can vary depending on load, weather and other variables. Exile's new MSBC-1 ET01 electronic boost controller takes fine-tuning a turbo system to a whole new level.

The new MSBC-1 ET01 features include

- Six stage programmable boost control
- 18 different ramp settings to control how fast the boost is allowed to build including a 2 stage ramp made up of a starting ramp, ending ramp and a 50%, 60% or 70% switch point.
- 0-80 PSI target boost range in 1 PSI increments.
- Launch stage for drag racing
- Shift input for automatic stage selection for drag race applications.
- 4 built in timers for timed boost control.
- Front panel stage selection and programming.
- Read out of actual boost during boost control.
- Built in self diagnostic feature.
- 2 analog data recorder outputs for actual and target boost level
- 2 solenoid drive outputs for increase and decrease solenoids.
- Can be used with single and dual port wastegates.

Retail price: **MSBC-1 ET01, \$695**. Kit includes processor, map sensor, increase and decrease solenoids and wiring harness.

About Exile Turbo Systems

Founded by industry veteran, Rick Head in 2006, Exile Turbo Systems LLC is a full-service Retail Distributor of Performance Turbochargers, Turbo Kits, Wastegates, Intercoolers, Boost Controllers, Intake Manifolds and Throttle Bodies. Product lines include Honeywell Turbo Technology, Zukinut Enterprises, Wilson Manifolds and more. The purpose of Exile Turbo Systems is simply to provide the Performance and Racing industry with the highest quality Products and Service second to none. For more information log on to www.exileturbo.com, call 805-432-5582 or email at rick@exileturbo.com
